MEDICAL CENTER

*extraordinary care*

To show its commitment to cardiovascular care, McKenzie-Willamette Medical Center is a participant with the American College of Cardiology. We maintain compliance with national heart disease treatment guidelines and standards of care, as part of our continuous quality improvement program.

## New Approach to Cardiac Care

McKenzie-Willamette Medical Center is the area's first advanced cardiac care program to provide a one-stop care facility for open heart surgery and comprehensive cardiac care. Local cardiologists, cardiac surgeons, anesthesiologists and intensivists provide both scheduled and emergency care 24/7 in The Heart Center.

The Heart Center at McKenzie-Willamette has a 600-square-foot cardiovascular operating room (CVOR), with the latest technology and equipment. Patients recover in the cardiovascular intensive care unit adjacent to the CVOR. Whether they are on the Heart Center unit for surgery or other cardiac treatments, patients stay in the same unit from admission through discharge.

In traditional open heart surgery environments, patients are moved from room-to-room and floor-to-floor during various stages of their hospitalizations. This set-up often increases anxiety for patients and their families, in an already stressful experience. Our facility alleviates that anxiety by keeping patients in the same unit throughout their stay.

This new approach to cardiac services provides more consistent communication among medical staff, less stress for the patient and enhanced, ongoing interaction between staff, patient and family.

## Comprehensive Cardiac Services

The Heart Center is located on the first floor of McKenzie-Willamette Medical Center. Under the medical direction of board-certified cardiologists, and surgeons, specially-trained cardiac nurses and technologists work as a team to help ensure patients and their families are comfortable, safe and informed throughout their cardiac procedures and surgeries. The Heart Center offers the following quality services:

- **Open Heart Surgeries, such as coronary artery bypass grafts, thoracic surgeries, as well as heart valve replacements and repairs**
- **Cardiac Ultrasound and Stress Testing**
- **Vascular Ultrasound**
- **Carotid Doppler Ultrasound**
- **Pacemaker Insertion**
- **Diagnostic Coronary Angiography**
- **Interventional Coronary Artery Stenting**
- **Acute MI (Heart Attack) Treatment**
- **Cardioversion**
- **Electrocardiograms (EKG)**
- **Peripheral Angiography**
- **Peripheral Intervention**
- **Thoracic & Abdominal Aneurysm Treatments**

From arrival at the hospital, through treatment, and even after discharge, The Heart Center's approach to cardiac care gives extra attention to details that help patients recover as quickly and fully as possible. For patients arriving through the Emergency Room, 24-hour physician coverage and registered nurses certified in Advanced Cardiac Life Support are prepared to treat myocardial infarctions (heart attacks) and other cardiac symptoms.

Following a heart attack, treatment or surgery, patients are enrolled in a Cardiac Rehabilitation Program, which involves lifestyle modifications such as exercise, good nutrition, smoking cessation, diabetes education and stress management.
